

Messenger USBi

The Messenger® USBi is a state-of-the-art digital audio playback device designed to provide a continuous-play audio source for message-on hold, background music, or any other audio application where high-quality audio playback is required. Messages are loaded from a standard USB flash drive to the unit's internal memory. Once loaded, the USB flash drive can be removed for added security. To load new audio simply plug in a USB drive containing the new MP3 files and the Messenger USBi automatically loads the new program to memory, with no reset needed. Audio content is easily managed by plugging the USB flash drive into a PC or MAC computer's USB port and "dragging and dropping" MP3 files to and from the drive. Your customers can receive new and updated message-on-hold or background music programs via e-mail or ftp and update the units themselves, saving you the expense of additional USB flash drives and the related mailing and tracking costs.

The Messenger USBi features include:

- Loading via USB Flash Drive
- Built-in memory for hours of audio
- No drivers or special software needed
- Playback quality up to 320Kbps
- Store up to 1024 messages
- Optional shuffle playback
- Built-in monitor speaker
- Sonocrypt Level 3 encryption (optional)
- LED status indicator
- Exceptional dealer support
- 3-year parts and labor warranty
